

AMENDMENT UNDER 37 C.F.R. § 1.111
U.S. Appln. No. 09/935,571

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1. (Currently amended)Telecommunication system comprising a network with fixed stations and comprising at least one mobile station for sending an identification code to said network via at least one fixed station and for allowing mobile communication to a subscriber using said mobile station, with said network comprising a database for storing subscriber-information indicating an interest of the subscriber to be matched with an interest of another subscriber, ~~characterised~~ characterized in that said database comprises subscriber-information related to said identification code for allowing at least a part of said subscriber-information at least to be exposed to at least one further subscriber, with said mobile station comprising a transmitter for transmitting an update code to said network via at least one fixed station, and with said network comprising a receiver for receiving said update code for updating at least a part of said subscriber-information stored in said database.

2. (Currently amended)Telecommunication system according to claim 1, ~~characterised~~ characterized in that said update code for updating at least a part of said subscriber-information defines at least either the amending of subscriber-information already stored or the storing of new subscriber-information.

AMENDMENT UNDER 37 C.F.R. § 1.111
U.S. Appln. No. 09/935,571

3. (Currently amended)Telecommunication system according to claim 1,
~~characterised~~ characterized in that said database comprises first subscriber-information related to
a first identification code defining a first subscriber and comprises second subscriber-information
related to a second identification code defining a second subscriber, with said network
comprising an ~~analyser~~ analyzer for ~~analysing~~ analyzing specific subscriber-information and
comprising a transmitter for in dependence of an analysis result transmitting at least one
message.

4. (Currently amended)Telecommunication system according to claim 3,
~~characterised~~ characterized in that said ~~analysing~~ analyzing of specific subscriber-information is
dependent upon a specific purpose code originating from a specific mobile station.

5. (Currently amended)Telecommunication system according to claim 4,
~~characterised~~ characterized in that said specific purpose code defines which part of said specific
subscriber-information is at least to be ~~analysed~~ analyzed.

6. (Currently amended)Telecommunication ~~signal-system~~ signal system according to claim 4,
~~characterised~~ characterized in that said specific purpose code defines which part of said specific
subscriber-information is at least to be amended and/or exposed.

AMENDMENT UNDER 37 C.F.R. § 1.111
U.S. Appln. No. 09/935,571

7. (Currently amended)Telecommunication system according to claim 3, ~~characterised~~ characterized in that said ~~analysing~~ analyzing and/or exposing of specific subscriber-information is dependent upon a specific location code defining which specific fixed station is involved and/or a location of said mobile station.

8. (Currently amended)Mobile station for use in a telecommunication system comprising a network with fixed stations and comprising said mobile station for sending an identification code to said network via at least one fixed station and for allowing mobile communication to a subscriber using said mobile station, with said network comprising a database for storing subscriber-information indicating an interest of the subscriber to be matched with an interest of another subscriber, ~~characterised~~ characterized in that said database comprises subscriber-information related to said identification code for allowing at least a part of said subscriber-information at least to be exposed to at least one further subscriber, with said mobile station comprising a transmitter for transmitting an update code to said network via at least one fixed station, and with said network comprising a receiver for receiving said update code for updating at least a part of said subscriber-information stored in said database.

9. (Currently amended)Database for use in a telecommunication system comprising a network with fixed stations and comprising at least one mobile station for sending an identification code to said network via at least one fixed station and for allowing mobile communication to a subscriber using said mobile station, with said network comprising said

AMENDMENT UNDER 37 C.F.R. § 1.111
U.S. Appln. No. 09/935,571

database for storing subscriber-information indicating an interest of the subscriber to be matched with an interest of another subscriber, ~~characterised~~ characterized in that said database comprises subscriber-information related to said identification code for allowing at least a part of said subscriber-information at least to be exposed to at least one further subscriber, with said mobile station comprising a transmitter for transmitting an update code to said network via at least one fixed station, and with said network comprising a receiver for receiving said update code for updating at least a part of said subscriber-information stored in said database.

10. (Currently amended) Method for use in a telecommunication system comprising a network with fixed stations and comprising at least one mobile station for sending an identification code to said network via at least one fixed station and for allowing mobile communication to a subscriber using said mobile station, with said network comprising a database for storing subscriber-information indicating an interest of the subscriber to be matched with an interest of another subscriber, ~~characterised~~ characterized in that said database comprises subscriber-information related to said identification code for allowing at least a part of said subscriber-information at least to be exposed to at least one further subscriber, with said method comprises the steps of transmitting an update code from said mobile station to said network via at least one fixed station, and of receiving said update code by said network for updating at least a part of said subscriber-information stored in said database.
